PROFESSIONAL SUMMARY

Technical Support Engineer with 1+ year of experience supporting high-availability SaaS platforms and handling P1/P2 incidents for global enterprise clients. Managed 1,000+ tickets with 98.5% SLA compliance and reduced MTTR by 25%. Skilled in API troubleshooting, SQL-based investigations, and incident management. Aspiring Cloud & DevOps Engineer with foundational hands-on experience designing cloud infrastructure using AWS, Terraform, Docker, and Linux. Leveraging an operational troubleshooting background and knowledge of CI/CD, GitOps, and monitoring (Grafana, CloudWatch) to transition into building scalable, secure, and automated cloud environments.

EDUCATION

Master of Computer Application Graphic Era Hill University, Dehradun, IN Percentage: 86.1%	Aug 2023 – Jun 2025
Bachelor of Science (Hons), Computer Science University of Delhi, Delhi, IN Percentage: 84.19%	Oct 2020 – Jul 2023

TECHNICAL SKILLS

- Cloud Platforms:** Microsoft Azure (AZ-900), AWS (EC2, S3, IAM, VPC, CloudWatch)
- Operating Systems:** Linux, Windows
- DevOps & CI/CD:** Docker, Kubernetes, GitHub Actions, ArgoCD, CI/CD Pipelines, GitOps
- Infrastructure & Networking:** Terraform, VPC, Security Groups, Load Balancers, DNS, HTTP/HTTPS, TCP/IP
- Monitoring & Observability:** CloudWatch, Grafana, Log Analysis, Prometheus
- Scripting & Automation:** Python, C
- Databases & Tools:** SQL, Git, GitHub, Postman

PROFESSIONAL EXPERIENCE

Technical Support Engineer FarEye Technologies, Noida, IN	Feb 2026 – Present
- Managed high-priority incident resolution for 6 premium US and EMEA enterprise clients, including Miele, TSC, HelloFresh, IKEA, Quantum, and Danube, ensuring 95% uptime for platforms processing 5,000+ daily transactions. - Led P1/P2 war rooms, collaborating with Development, QA, and Infrastructure teams to diagnose and resolve complex production issues, achieving 98.5% SLA compliance across 1,000+ tickets. - Conducted root cause analysis (RCA) and system debugging by analyzing Linux logs, API scripts, and system workflows related to order routing and tracking systems, resolving 40+ escalations monthly. - Executed API troubleshooting using Postman and validated REST API requests and responses to resolve client-specific backend service failures, reducing data sync errors by 15%. - Constructed complex SQL queries to investigate data discrepancies, cutting average investigation time by 30%. - Utilized monitoring tools like Grafana and New Relic for real-time system observation, contributing to a 25% reduction in Mean Time to Resolution (MTTR). - Facilitated Monthly Service Review (MSR) meetings with 10+ stakeholders and authored detailed RCA documents.	
Technical Support Trainee FarEye Technologies, Noida, IN	Aug 2025 – Feb 2026
Supported production issue investigation by analyzing 200+ application workflows, troubleshooting platform issues, collaborating with cross-functional teams, and assisting in root cause analysis to ensure timely incident resolution within a 48-hour SLA.	

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900) - Microsoft
- Foundation of Cloud IoT Edge ML - NPTEL
- Terraform for the Absolute Beginners with Labs - Udemy
- Kubernetes for the Absolute Beginners with Hands-on Labs - Coursera
- Python for Machine Learning & Data Science Masterclass - Udemy
- AWS Course Certificate - Udemy

PROJECTS

End-to-End DevOps Automation for an Expense Tracker Application

Tech Stack: Docker, Kubernetes, GitHub, GitHub Actions, Docker Hub, ArgoCD, Linux, Prompt Engineering.

- Developed a full-stack Expense Tracker web application using Prompt Engineering with PostgreSQL as the backend database, capable of handling simultaneous user sessions.
- Containerized the application and database using Docker, enabling consistent, portable, and production-ready deployments and reducing deployment time by 40%.
- Built an automated CI pipeline using GitHub Actions to build, version, and publish Docker images to Docker Hub on every code commit, accelerating release cycles by 30%.
- Implemented GitOps-based Continuous Deployment (CD) using ArgoCD to automatically synchronize Kubernetes manifests from GitHub, achieving 100% automated deployments and eliminating configuration drift across multiple pods.
- Orchestrated application deployment using Kubernetes Deployments, Services, ConfigMaps, Secrets, Persistent Volume Claims (PVCs), and Ingress to ensure scalability, secure configuration management, and persistent storage.
- Validated the complete deployment workflow on a Minikube Kubernetes cluster, demonstrating an end-to-end DevOps pipeline, deployment automation, and container orchestration.

AWS Cloud & DevOps Deployment - Inventory Management Application

Tech Stack: Terraform, AWS EC2, Docker, PostgreSQL, VPC, IAM, CloudWatch, GitHub, Github Action.

- Provisioned AWS infrastructure using Terraform, including VPC, public subnet, Internet Gateway, route table, security group, and EC2 instance for application hosting, reducing manual provisioning time by 60%.
- Containerized and deployed the Inventory Management application with PostgreSQL, using Docker networking and persistent database storage for reliable application-database communication, improving application availability to 99.9%.
- Automated EC2 provisioning and Docker deployment through Terraform user data, reducing manual server configuration and enabling repeatable infrastructure deployment.
- Configured AWS CloudWatch monitoring with an 80% CPU utilization alarm threshold to identify high-resource usage, preventing 3 potential server downtimes during peak loads.
